## GT Stock Manager

Version 2.1.1 | English

Gestão de Terminais, SA

**by Layton Taimo**

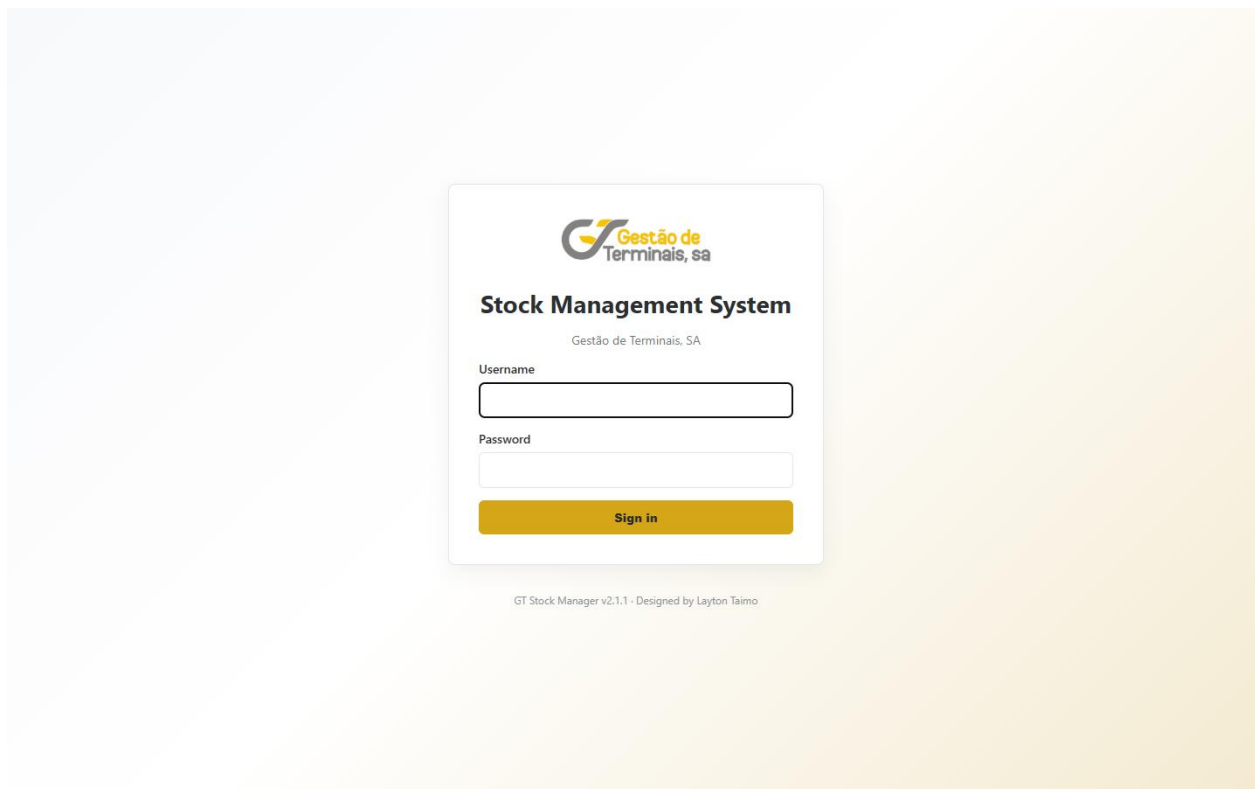

## Contents

This manual explains the operational and administrative use of GT Stock Manager. Available screens and actions depend on the profile assigned to each user.

1. Access and language
2. Dashboard
3. Products and store
4. Stock movements
5. SR requisitions and approvals
6. Procurement / Non-stock
7. Stock replenishment
8. Reports
9. Users
10. Profiles and permissions
11. Settings
12. Notifications, documents and imports
13. Audit and security
14. Mobile use
15. Profile responsibilities

## 1. Access and language

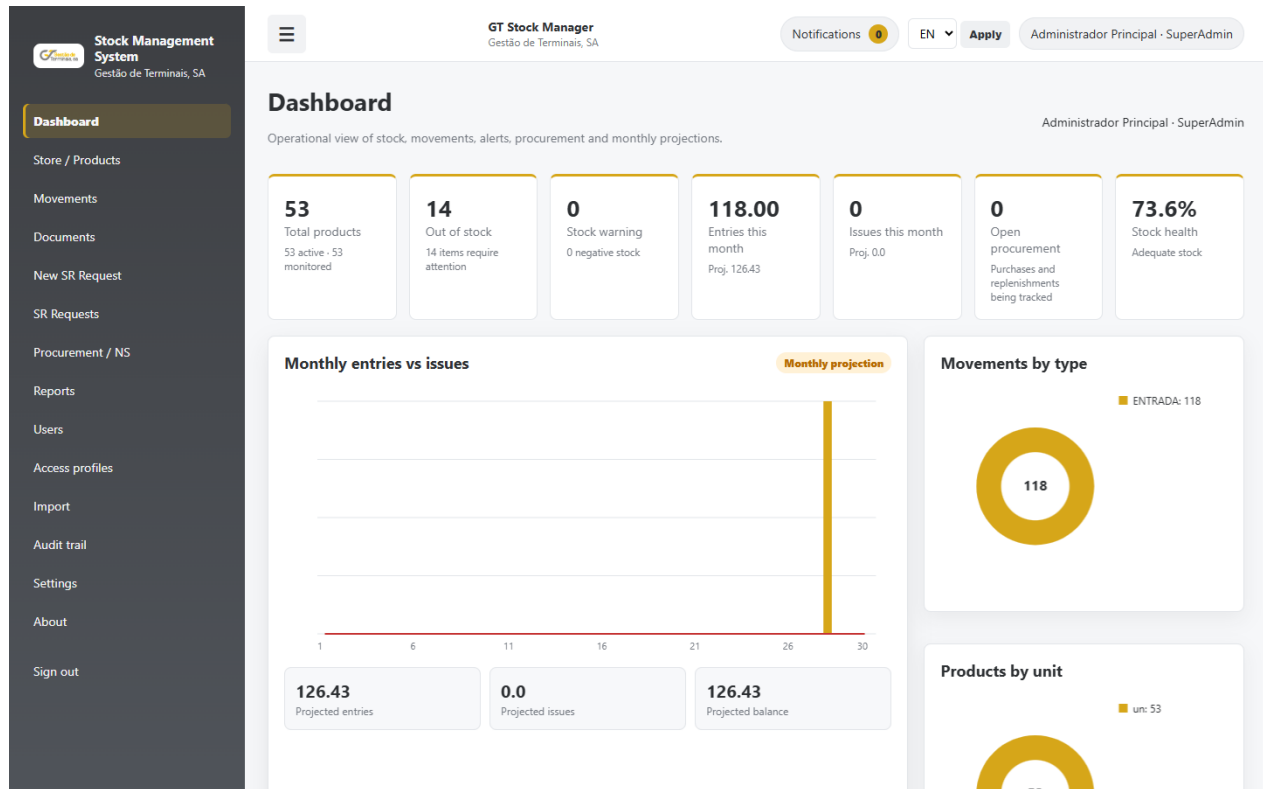

1. Open the system address, enter your username and password, and select Sign in.
2. Use the PT/EN selector in the header. The preference is stored on the account and remains after signing out and signing in again.
3. On first access, change the password when prompted. Never share credentials.

1. Access and language

## 2. Dashboard

1. The Dashboard summarises products, stock-outs, warnings, movements, requisitions and Procurement processes.
2. Cards and charts update from recorded movements and workflow statuses.
3. Use the shortcuts and tables to open the related report or process.

2. Dashboard

## 3. Products and store

1. View, filter and edit products. The system generates the code; the original name is never translated automatically.
2. An optional English display name can be entered without replacing the original business data.
3. Define unit, unit price, minimum stock and monitoring. Inactive or unmonitored items do not create replenishment warnings.
4. Existing quantity adjustments require permission, a mandatory reason and an audit movement.

### 3. Products and store

## 4. Stock movements

1. Select Entry, Issue, Return or Adjustment. Relevant fields change with the action.
2. Entries require an origin or supplier; issues require a destination department and responsible person.
3. The system blocks invalid quantities and any operation that would create negative stock.
4. Manual adjustments require a reason and remain in the audit trail.

### 4. Stock movements

Gestão de Terminais, SA | Departamento de Tecnologia e Informação | by Layton Taimo | 6

## 5. SR requisitions and approvals

1. Select the department, Operational Manager on duty and products with available stock.
2. The total value is calculated from unit prices and determines the approver profile through the matrix.
3. The reviewer may approve all, reject all or partially approve. Every rejected quantity requires an observation.
4. Approval does not reduce stock. The Stock Manager records the issue/delivery once.
5. Use Cancel or Back to leave the workflow without creating movements.

GT Stock Manager v2.1.1 - Designed by Layton Taimo

### 5. SR requisitions and approvals

## 6. Procurement / Non-stock

1. Create a request with need type, priority, estimated budget, description, technical requirements and HSE requirements.
2. The workflow is: need, ToR, HOD and Terminal Manager approvals, budget, classification, tender, technical and financial evaluations, award, PO, receipt and archive.
3. The final approval route is calculated from the matrix using the current process value.
4. The ToR and request form can be previewed, downloaded as PDF and sent by email.

The screenshot shows the 'New non-stock requisition' form in the GT Stock Manager system. The interface includes a sidebar menu on the left with options like Dashboard, Store / Products, Movements, Documents, New SR Request, SR Requests, **Procurement / NS**, Reports, Users, Access profiles, Import, Audit trail, Settings, About, and Sign out. The main content area is titled 'New non-stock requisition' and includes a description of the workflow. The form fields are as follows:

- ToR No.:** Generated automatically if left blank.
- Job title:** Job / procurement title.
- Description / ToR / scope:** Clearly describe the goods, service or works.
- Technical requirements:** Specifications, quantities, technical standards, drawings and detailed scope.
- HSE / safety requirements:** Permissions, HSE documentation, PPE, risks and mandatory requirements.
- Justification:** Explain the reason and context for the request.
- Type:** Goods (selected).
- Cost centre:** Optional.
- Estimated budget (R\$781):** (partially visible)

### 6. Procurement / Non-stock

## 7. Stock replenishment

1. The Stock Manager selects monitored products, enters quantities and estimated prices, and creates the purchase request.
2. The selection may include minimum-stock suggestions and other active products.
3. After approval and PO, record only physically received quantities. Each receipt creates a stock entry linked to the process.

### 7. Stock replenishment

## 8. Reports

1. Reports cover stock, movements, requisitions, Procurement/replenishments and items requiring attention.
2. Apply filters before exporting. CSV, Excel and PDF follow the selected language and preserve user-entered data.
3. Inactive or unmonitored products are excluded from the attention report.

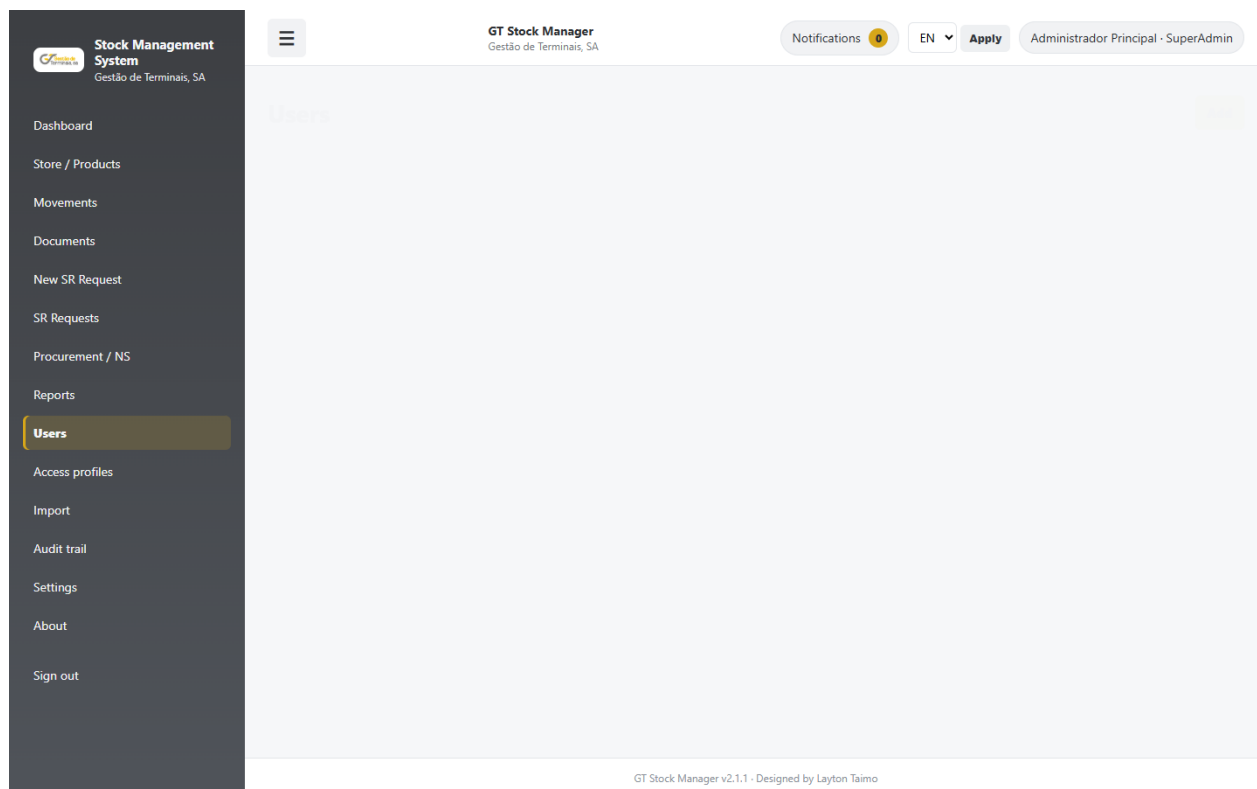

The screenshot displays the 'GT Stock Manager' web application interface. On the left is a dark sidebar menu with options: Dashboard, Store / Products, Movements, Documents, New SR Request, SR Requests, Procurement / NS, **Reports** (highlighted), Users, Access profiles, Import, Audit trail, Settings, About, and Sign out. The main content area is titled 'Reports' and contains five report cards: 'Stock' (Complete catalogue, statuses and monitoring), 'Movements' (Entries, issues, returns and adjustments), 'SR requisitions' (Internal requests and their approvals), 'Procurement and replenishments' (Purchases, POs, receipts and process statuses), and 'Stock requiring attention' (Active and monitored items only). The top header includes the 'GT Stock Manager' logo, a hamburger menu, a notifications bell icon, a language dropdown set to 'EN', an 'Apply' button, and the user role 'Administrador Principal - SuperAdmin'. The footer text reads 'GT Stock Manager v2.1.1 - Designed by Layton Taimo'.

### 8. Reports

## 9. Users

1. Administrators can create and edit accounts and assign profile, department, language and notification channels.
2. Department is optional; invalid fields show a clear message instead of a technical error.
3. Removing access deactivates the account and preserves history. SuperAdmin and self-removal have additional protection.

### 9. Users

## 10. Profiles and permissions

1. Profiles represent functions and control available modules and actions. They can be created, edited and removed when unused.
2. The approval matrix references profiles, not product categories.
3. Apply least privilege: assign only the access required for the user's responsibilities.

### Access profiles

Profiles define user access and functions. Product categories are managed in Settings.

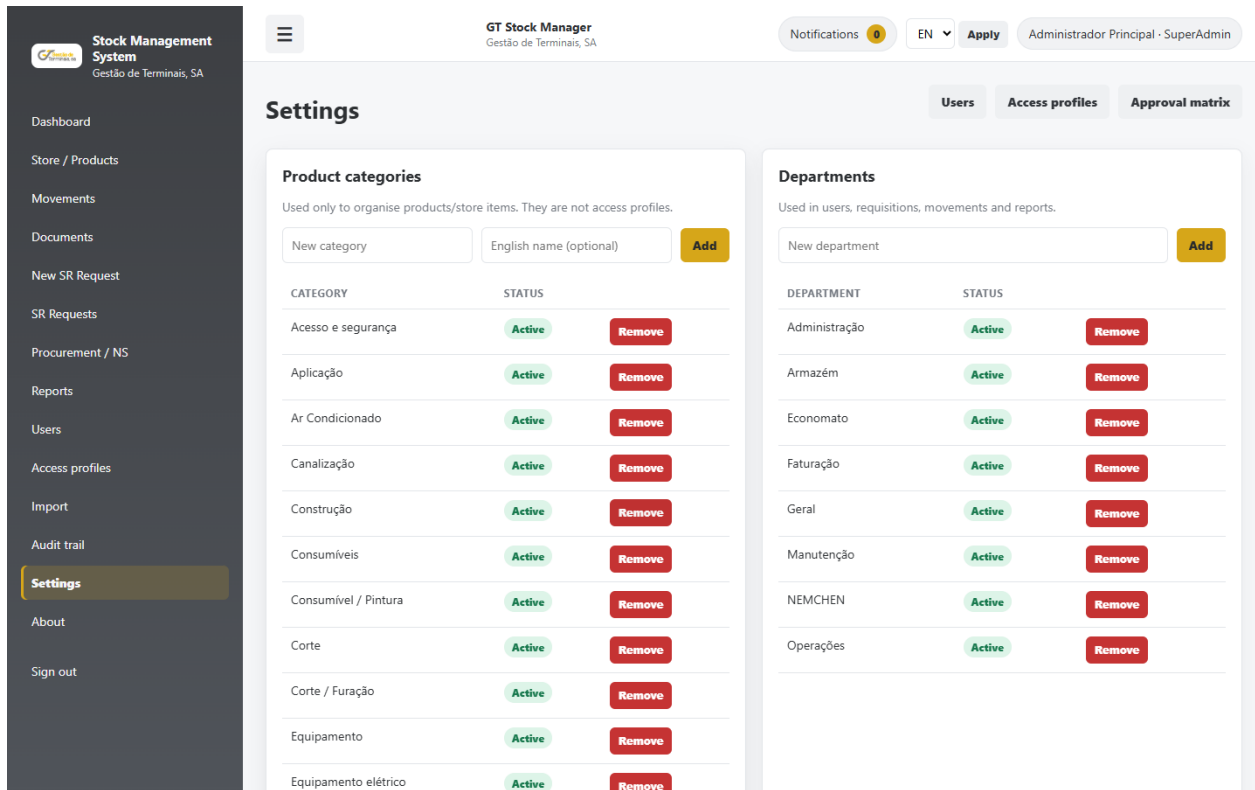

| PROFILE / FUNCTION         | USERS | PERMISSIONS |             |
|----------------------------|-------|-------------|-------------|
| <b>Administrator</b>       | 0     | 24          | Edit Remove |
| <b>Terminal Manager</b>    | 0     | 6           | Edit Remove |
| <b>Editor</b>              | 0     | 9           | Edit Remove |
| <b>Operational Manager</b> | 0     | 4           | Edit Remove |
| <b>Stock Manager</b>       | 0     | 9           | Edit Remove |
| <b>SuperAdmin</b>          | 1     | Todas       | Edit        |
| <b>User</b>                | 0     | 2           | Edit Remove |

GT Stock Manager v2.1.1 - Designed by Layton Taimo

### 10. Profiles and permissions

## 11. Settings

1. Manage categories, departments and the approval matrix. Removal preserves historical records through deactivation where required.
2. The matrix defines value ranges, procurement method and approver profile. Avoid incomplete or overlapping ranges.
3. Full stock reset requires permission, typed confirmation and a security code; it creates adjustment movements and keeps history.

**GT Stock Manager**  
Gestão de Terminais, SA

| Operações     | Active | Remove |

11. Settings

## 12. Notifications, documents and imports

1. Notifications open the related requisition or process directly and are created in the recipient's language.
2. Email and WhatsApp follow the user's preference and configuration. Stock documents remain linked to the related movement or product.
3. For imports, review the preview and error report before confirmation. Saving is transactional and auditable.

| <b>Operational Manager</b>      | Request creation and HOD approval where configured.                                    |
| <b>Procurement / Committees</b> | Classification, tender, evaluations, PO, receipt and archive according to permissions. |
| <b>User</b>                     | Creation and tracking of permitted own requests.                                       |

### Support and good practice

When reporting an error, record the process number, page, time and displayed message. Do not change data to bypass validations.
